DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-9 have been considered but are moot in view of the new ground(s) of rejection.

Information Disclosure Statement

2. The information disclosure statement filed 2/27/2002 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Messenger (USPN 5,101,406).
- 5. Regarding claim 1, Messenger discloses a method for adjusting data modulation at a subscriber unit, comprising: receiving data at a transmitter for transmission (col. 2, line 46-col. 3, line 6 and col. 8, line 25-col. 9, line 15); formatting the received data into packets for transmission, each packet having a particular type of encoding/data modulation (col. 2, line 46-col. 3, line 6 and col. 8, line 25-col. 9, line 15); transmitting the packets (col. 2, line 46-col. 3,

Art Unit: 2665

line 6 and col. 8, line 25-col. 9, line 15); monitoring a return channel for receipt of an acknowledgment for each packet that that packet has been received (col. 2, line 46-col. 3, line 6 and col. 8, line 25-col. 9, line 15, esp. col. 8, lines 60-65); retransmitting a packet at the transmitter, if an acknowledgment for that packet has not been received (col. 2, line 46-col. 3, line 6 and col. 8, line 22-col. 9, line 15, esp. col. 8, lines 22-24 and col. 8, lines 60-65); collecting retransmission statistics (col. 2, line 46-col. 3, line 6 and col. 8, line 25-col. 9, line 15, esp. col. 8, line 60-col. 7, line 3); and adjusting each particular encoding/data modulation using the collected retransmission statistics, wherein if the collected retransmission statistics indicate a low number of retransmissions, a higher capacity encoding/modulation scheme is selected as the particular encoding/data modulation and if the collected retransmission statistics indicate a high number of retransmissions, a lower capacity encoding/data modulation scheme is selected as the particular encoding/data modulation (col. 2, line 46-col. 3, line 6 and col. 8, line 25-col. 9, line 15).

6. Regarding claim 7, Messenger discloses a method for adjusting data modulation at a subscriber, comprising: formatting data into packets for transmission over a wireless air interface (col. 2, line 46-col. 3, line 6 and col. 8, line 25-col. 9, line 15); receiving packets of data over said air interface, each packet having a particular encoding/data modulation (col. 2, line 46-col. 3, line 6 and col. 8, line 25-col. 9, line 15); for each received packet, generating and transmitting a positive acknowledgment at the physical layer of said air interface when a received packet has an acceptable error rate (col. 2, line 46-col. 3, line 6 and col. 8, line 25-col. 9, line 15, esp. col. 8, lines 60-65); collecting retransmission statistics (col. 2, line 46-col. 3, line 6 and col. 8, line 25-col. 9, line 15, esp. col. 8, lines 60-65); wherein if the collected retransmission statistics indicate a low number of retransmissions, a higher capacity encoding/modulation scheme is selected as

Application/Control Number: 10/085,187 Page 4

Art Unit: 2665

the particular encoding/data modulation and if the collected retransmission statistics indicate a high number of retransmissions, a lower capacity encoding/data modulation scheme is selected as the particular encoding/data modulation (col. 2, line 46-col. 3, line 6 and col. 8, line 25-col. 9, line 15, esp. col. 8, lines 60-65).

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 2, 6, and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Messenger (USPN 5,101,406) as applied to claims 1 and 7 above, and further in view of Sayeed et al (USPN 5,828,677).
- 9. Regarding claim 2, referring to claim 1, Messenger does not expressly disclose that the particular type of encoding/data modulation is forward error correction (FEC). Sayeed teaches, in a system for adaptive ARO schemes, using FEC as a type of encoding/data modulation since FEC is very well known (col. 1, lines 42-50). It would have been obvious to one of ordinary skill in the art at the time of the invention to use FEC as a type of encoding/data modulation since FEC is a very well known encoding/data modulation scheme.
- 10. Regarding claims 6 and 9, referring to claims 1 and 7, Messenger does not expressly disclose identifying a packet as having an unacceptable error rate responsive to receipt of a negative acknowledgement since Messenger discloses using ACK (col. 2, line 46-col. 3, line 6 and col. 8, line 25-col. 9, line 15). Sayeed teaches, in a system for adaptive ARQ schemes, using

Application/Control Number: 10/085,187

Art Unit: 2665

receipt of a NACK to indicate an unacceptable error rate since NACK signals indicate that a signal was received erroneously (col. 1, lines 42-61 and col. 2, lines 55-65). It would have been obvious to one of ordinary skill in the art at the time of the invention to identify a packet as having an unacceptable error rate response to receipt of a negative acknowledgment since NACK signals indicate that a signal was received erroneously.

Page 5

- Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Messenger (USPN 5,101,406) in view of Sayeed et al (USPN 5,828,677) as applied to claim 2 above, and further in view of Barton et al (USPN 6,449,246).
- 12. Regarding claim 3, referring to claim 2, Messenger in view of Sayeed discloses FEC encoding/data modulation. Messenger in view of Sayeed does not expressly disclose that the packets are transmitted using an orthogonal frequency division multiple access (OFDMA) air interface and that selective nulling of subchannels in an OFDMA set is performed. Barton teaches, in a wireless system employing FEC, that it is well known to null subchannels in an OFDM system in order to lower PAR (col. 8, line 64-col. 9, line 3 and col. 11, lines 34-38). It would have been obvious to one of ordinary skill in the art at the time of the invention to perform FEC encoding/data modulation adjusting in addition to selective nulling of subchannels in an OFDMA set in order to perform data correction (FEC) and lower PAR (selective nulling) in an OFDMA system.
- 13. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Messenger (USPN 5,101,406) as applied to claim 1 above, and further in view of Chow (USPN 6,064,692).
- 14. Regarding claim 4, referring to claim 1, Messenger does not expressly disclose that the packets are transmitted using a single carrier having a frequency domain equalization (SC-FDE)

Page 6

Application/Control Number: 10/085,187

Art Unit: 2665

air interface. Chow discloses, in a wireless transmission system using FEC, that frequency domain equalization is used to equalize the phase and attenuation over the various frequencies (col. 2, lines 4-18). It would have been obvious to one of ordinary skill in the art at the time of the invention to use a single carrier having a frequency domain equalization (SC-FDE) air interface since frequency domain equalization is well known in order to equalize the phase and attenuation over the various frequencies.

- 15. Claims 5 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Messenger (USPN 5,101,406) as applied to claims 1 and 7 above, and further in view of Chen (USPN 5,982,760).
- Regarding claims 5 and 8, referring to claims 1 and 7, Messenger does not expressly disclose that the return channel is a fast feedback channel when the packets are transmitted using a code division multiple access (CDMA) air interface. Chen teaches, in a wireless system, that CDMA contains a fast feedback channel on which return messages are transmitted where the return channel has high bandwidth or low delay (col. 2, lines 52-57 and col. 4, lines 54-57). It would have been obvious to one of ordinary skill in the art at the time of the invention to have the return channel be a fast feedback channel in a CDMA system since fast feedback channels are well known as means to have low delay or high bandwidth on the return channel.

Conclusion

17. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2665

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel J. Ryman whose telephone number is (703)305-6970. The examiner can normally be reached on Mon.-Fri. 7:00-5:00 with every other Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Huy Vu can be reached on (703)308-6602. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
